

Структура базы данных

Выше схема базы данных, собранной из двух полученных таблиц.

Исходные таблицы не были в нормальной форме, потому что в них содержались несколько атрибутов, которые могут быть разделены на более специфические таблицы. Из таблицы с транзакциями были выделена справочная таблица о продуктах. Стоимость продуктов и непосредственная цена продажи, остались в таблице с транзакциями, так как в некоторых случаях не зависят от product_id или характеристик самого продукта, см ниже.

Поскольку одному product_id могут соответствовать несколько наборов значений, таблицы с транзакциями и продуктами записаны в обрезанном формате. Таблицы с покупателями и их адресами записаны полностью.
